

2015 IMPACT REPORT

Iroquois Valley Farms unique impact measurement approach is based on a simple idea: accurately articulate one's Vision and then measure impacts against those principles. The Company Vision Statement has seven founding principles and the Company shares with advisors, members, farmers and the public, how it performs in expressing those values.

ENABLE THE NEXT GENERATION OF YOUNG FARMERS TO POSITIVELY IMPACT WORLD HEALTH

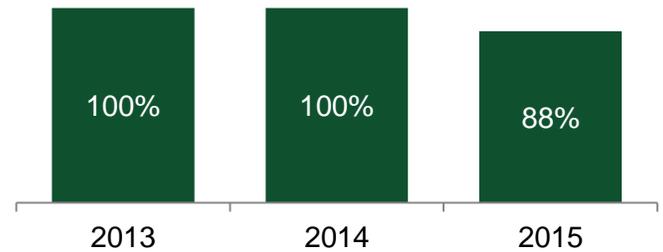

Number of Farmers

Farm families think in generations, of passing the farm on to their children. Iroquois Valley Farms has the same tradition, actively focusing on land access for young millennial farmers through the Young Farmer Land Access Program. As of 2015 year end, the Company has purchased 2,500 acres for millennial farmers.

KEEP THE FARMERS ON THE LAND

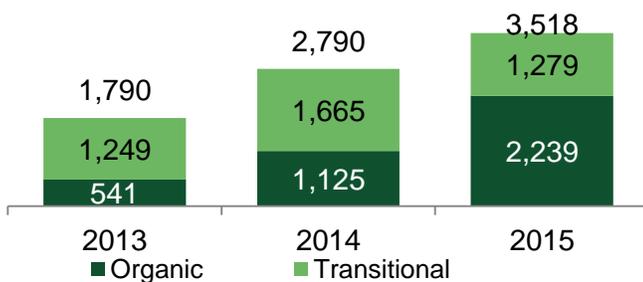

Farmer Retention Rate

Organic farming requires farmers to make a long-term commitment. Iroquois Valley Farms is structured to support that commitment. While the Company's business model reduces ownership risk factors for the farmer, farm operations, as part of life, are subject to risk. After seven years of 100% farmer retention, two farmers left Company owned farms in 2015. One farmer gave up farming after suffering a debilitating accident. The other farmer left for financial reasons. Both farms are now occupied as new opportunities by other farmers.

FARM WITH HEALTHY, HUMANE AND ORGANIC PRACTICES

Owned Acres

The benefits of organic, regenerative farming practices to the health of the planet and all who call it home are clear and fundamental. Our farms support and increase biodiversity overall, including soil fertility, native plants, ecosystem pollinators, birds, and other species. Iroquois Valley Farms supports farmers that farm without GMOs, biocides, or other toxic chemicals.

Benefits of Organic Farming

Nutritious, Healthy Food – Iroquois Valley Farms' tenants follow organic farming rules, which increases nutritional content while excluding genetically modified organisms, chemical pesticides, herbicides, and synthetic fertilizers – all known to be harmful to humans and ecosystems.

Healthy Planet – Regenerative, biodiverse ecosystems start with safe, healthy water. Organic farming practices preserve, remediate and enhance water quality. Conventional agriculture creates 60% of all water pollution, according to the EPA.

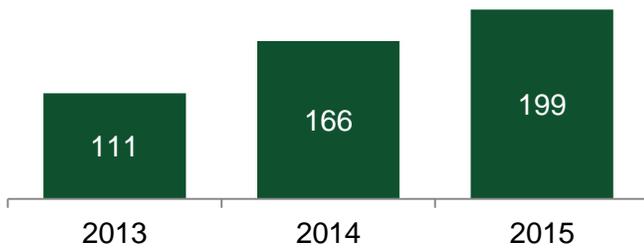

Regenerative Soil Management – Organic farmers recognize soil as a complex, living system of fungi, bacteria, insects, earthworms, and much more. Regenerating organic matter in the soil allows for carbon sequestration as well as water filtering, retention and storage. Healthy soil supports a natural ecosystem where abundantly nutritious food grows and wildlife thrives.

2015 IMPACT REPORT

GROW A BROAD-BASED MEMBERSHIP

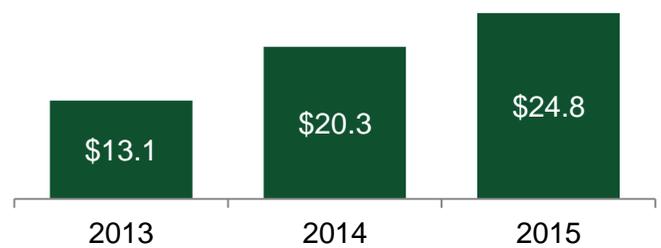

Number of Equity Members

Investors have the opportunity to invest in a diversified portfolio of farms that are foundational to emerging local and regional food systems. Iroquois Valley Farms envisions reaching thousands of like-minded investors concerned about the health of people, the planet and financial stability.

TRANSITION TRADITIONAL INVESTMENT CAPITAL

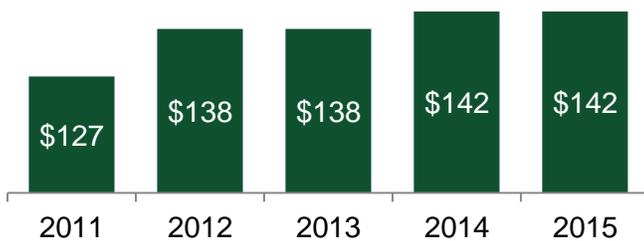

Company Asset Value

Farmland has a long history as a stable and moderate growth investment. With population increases straining supply and arable land limited, value should remain strong. Investment capital now has a clear and extremely viable choice to move away from conventional trading and extractive practices to renewable and regenerative uses.

MAINTAIN A FAIRLY VALUED, DEMOCRATICALLY GOVERNED ENTERPRISE

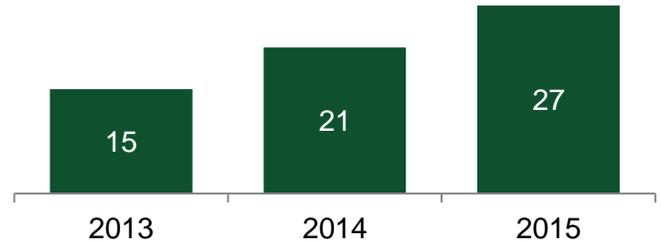

Price Per Membership Interest

The ability for direct, stakeholder investment in sustainable farmland helps secure the health of a community, a region and of a nation. Iroquois Valley Farms, with Board oversight, enables both members and farmers to enjoy a stable and profitable return on their farming investment.

PROTECT FARMLAND

Number of Farms

Empowering family farms to thrive and grow market share is part of Iroquois Valley Farms mission to replace the monoculture. An agricultural renaissance, celebrating and enhancing our living relationship with the Earth, is clearly underway. The Company's ability to hold farmland indefinitely enables secure farmland access for future generations dedicated to a healthy and just food system.

In 2015, Iroquois Valley Farms extended significant triple-bottom-line growth achieved in 2014, the first year the Company released the Impact Report. Iroquois Valley Farms is increasing organic food availability, developing farmland access (especially for young, millennial farmers), and enhancing the healthy farming practices of rural communities. At the same time, investor opportunity to be direct and meaningful stakeholders in a healthier food system has never been as great as it is now. The Company strengthened its balance sheet and produced a profit for the second year in a row. As a result, a member distribution (dividend) is being issued for the first time. The Company's commitment to social justice is further reflected in its nine-member Board of Managers, now including three farmers, one minority and two women. Iroquois Valley Farms is committed to continue setting the standard for agricultural, triple-bottom-line companies.
